+ PROJECTS:

INSURANCE FRAUD ANALYTICS

6 Months

Environment: Hadoop,

Nutch

Back End : Apache

Solr

Server Side : SigmaJS

This project is used to find the fraudulent claims from the social media data and extract the claimant social media data. This is an automated system. We us Apache Solr to get data on the fly and Apache Nutch is used to crawl the data. SigmaJS is used to map the entities between the users and the fraudulent claimants.

ASSISTMYCASE

Environment: Php,

Yii

Back End : Postgre/

Solr

Front End : HTML/

CSS

This project deals with extracting data from user generated content like twitter and google news. This web application is a legal advising tool that does an automation work for lawyers to deal with cases in a smarter and efficient way. Solr and Postgre is used for Backend. Php Yii framework is used as front end.
